

NEVADA'S MINING INDUSTRY

PERCEPTIONS AND REALITIES

2017

JEREMY AGUERO

Perceptions

Applied Analysis conducted its 6th annual survey of mining businesses on behalf of the Nevada Mining Association; we also focused on women in the mining industry during another survey which wrapped up in the beginning of this year.

From the survey results, it is clear that there are some potential misconceptions relating to Nevada's economy, the mining industry and the benefits mining brings to the state of Nevada.

Realities

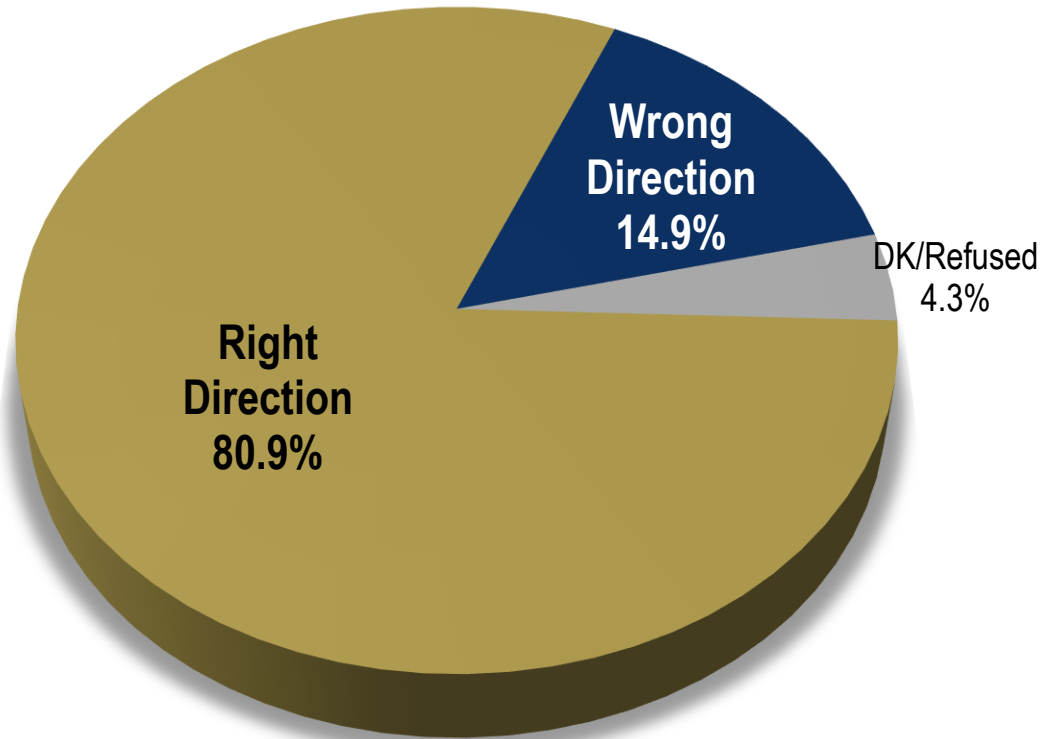

Nevada is today among the healthiest and most productive economies in the United States. It leads the nation in population growth, employment growth and personal income growth.

Nevada's mining industry remains an important element of the State's economic success in and out of its rural areas. The industry comprises the smallest share of the State's employment, but features two of the ten highest assessed taxpayers.

Nevada will soon play a major role in supplying lithium to Tesla

By STAFF WRITER · Sep 22, 2015, 7:22PM

The vast desert landscape of Nevada will soon become home to more than just Tesla's Gigafactory as the electric carmaker has signed an agreement with Vancouver-based Pure Energy Minerals to provide lithium to the battery factory.

The deal establishes a commitment for an annual purchase volume of product over a period of five years by Tesla and/or its authorized purchasers. The agreement also sets a predetermined price on the lithium to supply Tesla's battery cell manufacturing process.

According to *Fortune*, the deal is somewhat unusual in the world of battery manufacturing as the majority of the world's lithium comes from Australia, Argentina, Chile and eastern China.

“The vast desert landscape of Nevada will soon become home to more than just Tesla’s Gigafactory as the electric carmaker has signed an agreement with Vancouver-based Pure Energy Minerals to provide lithium to the battery factory.”

Trending: Is Lithium Rush the new Gold?

14:25 26 Apr 2016

What are the prospects for 21st century wonder metal lithium?

Share ▾

Pictured- the Nevada desert, home of a new lithium rush?

Lithium may be present in all of us but it seems like the Nevada desert is where a new metal rush is beginning to turn into a stampede.

The soft, silver-white metal belonging to the alkali metal group has traces in all organisms. The element serves no apparent vital biological function, since animals and plants survive in good health without it, though non-vital functions have not been ruled out.

But its many and varied other applications appear to be what has several companies, such as **Sienna Resources (CVE:SIE)**, and **Enertopia Corp (OTCMKTS:ENRT, CNSX:TOP)** taking a major interest in it. Meanwhile, **Tesla Motors (NASDAQ:TSLA)** in partnership with Panasonic is building a "gigafactory" lithium battery manufacturing plant near Reno, Nevada.

And let us not forget news on Monday that a rise in global demand and limited sources convinced **Crystal Peak Minerals Inc. (OTCQX:CPMMF)** to consider entering the lithium market. [Read more here](#)

Lithium and its compounds have several industrial applications, including heat-resistant glass and ceramics, lithium grease lubricants, flux additives for iron, steel and aluminium production, lithium batteries, and lithium-ion batteries. These uses account for more than three quarters of lithium production.

Sienna announced last week that it had acquired the Esmeralda project in Clayton Valley, Nevada, which is prospective for lithium, and plans to start operations shortly. [Read more here](#)

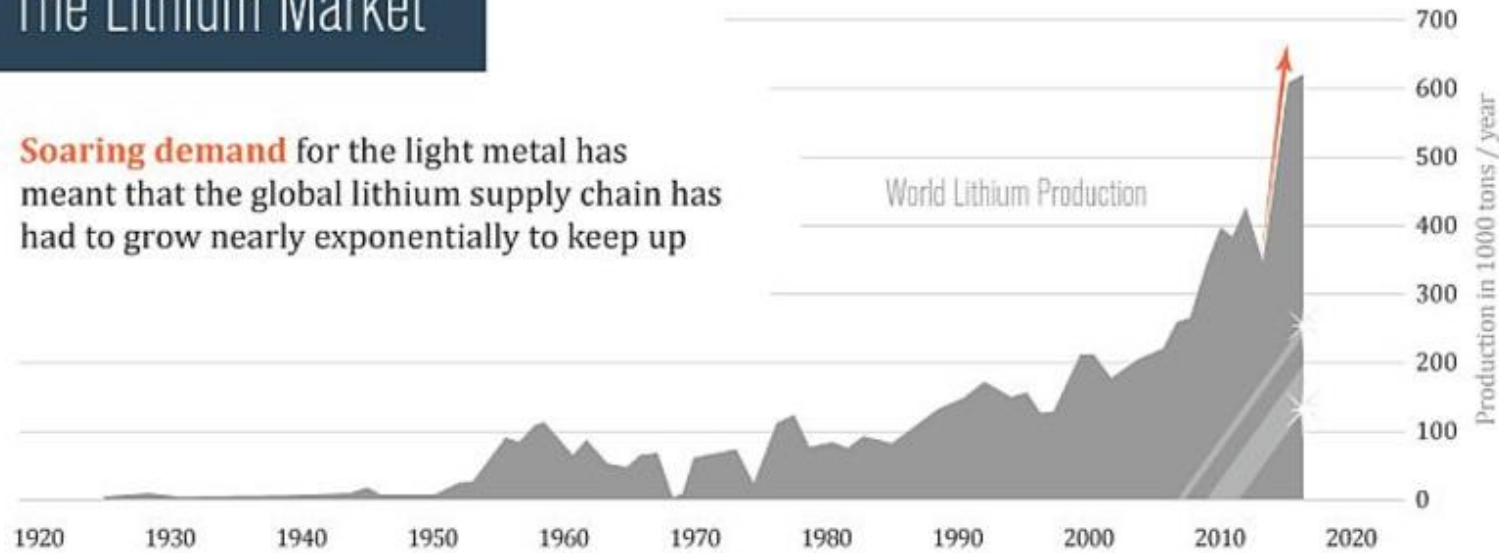

Sienna shares, which had been trundling along at around C\$0.02 until the end of January have since soared to a recent peak of C\$0.17 after its Esmeralda news.

“Lithium may be present in all of us but it seems like the Nevada desert is where a new metal rush is beginning to turn into a stampede.”

 - National Environmental Policy Act (NEPA)
 - Clean Air Act
 - Federal Land Policy and Management Act
 - Clean Water Act and Safe Drinking Water Act
 - Endangered Species Act

Commentary: Interior's new sage grouse protection efforts welcomed

Aug 23, 2017

Earlier this month Interior Secretary Ryan Zinke ordered the implementation of recommendations from a team that reviewed the previous administration's draconian land use restrictions under the guise of protecting greater sage grouse. The team — which included officials from Interior, Fish and Wildlife Service, Bureau of Land Management, U.S. Geological Survey, the U.S. Forest Service and representatives from the 11 affected states — called for lifting certain restrictions that impacted economic activity without actually affecting sage grouse populations.

Montana native Zinke's 55-page order echoed criticisms that were included in various lawsuits brought by several states, including Nevada. Zinke's order says the changes are not one-size-fits-all, the very words used by Nevada Attorney General Adam Laxalt a year ago about litigation he had filed to block the land use restrictions.

“Nevada’s lawsuit accused the various federal land agencies of violating the law and ignoring scientific evidence when it concocted a 341-page pronouncement in 2015 that 10 million acres of public land in 16 Western states — nearly a third of that in Nevada — would be taken out of consideration for future mining claims.”

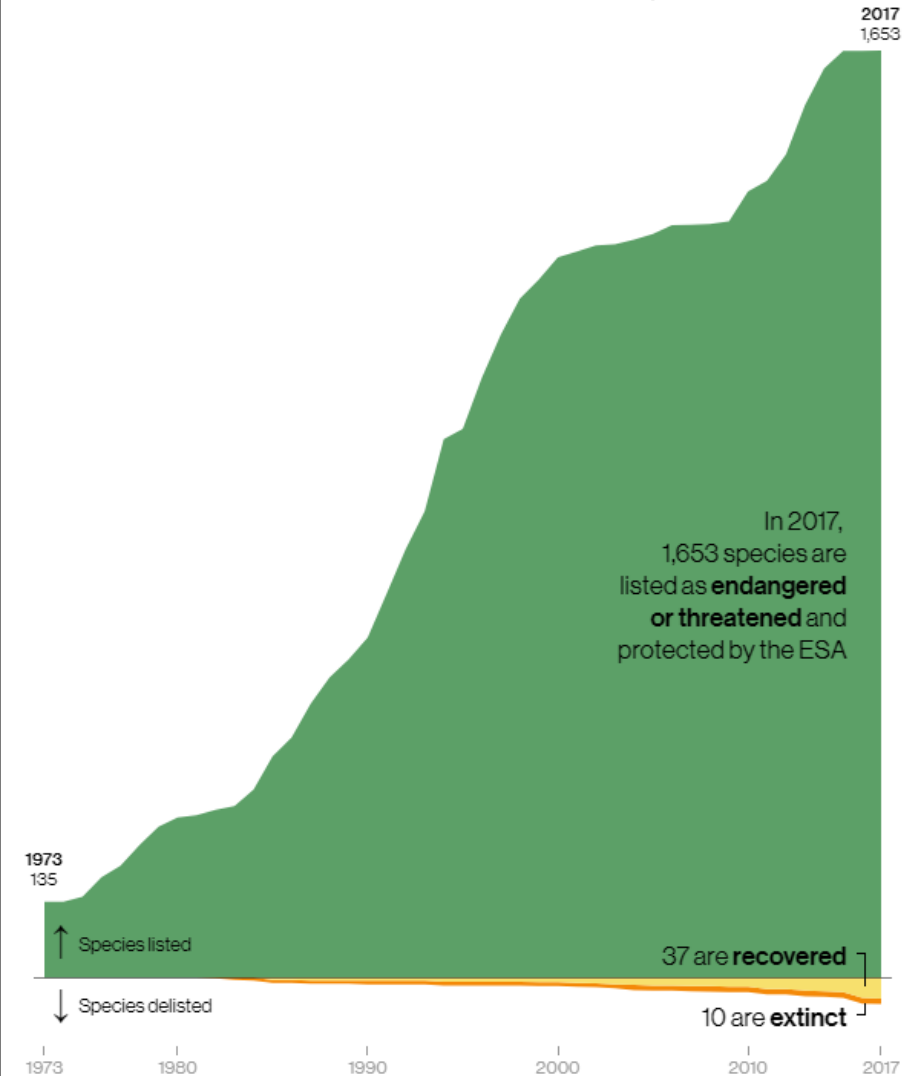

-- Elko Daily Free Press, 8/23/17

“One of the proposals to change the ESA, introduced in April 2017 by Senator Dean Heller, a Nevada Republican, would require any decision to protect a species to ‘be made only with the consent of the Governor of each state in which the endangered or threatened species is present’.”

-- National Geographic, 5/19/17

Critics say the ESA is ineffective because so many species remain on the list, but supporters say that is exactly what illustrates its enormous success

MINExpo convention**

Two women stand for a photo in front of a Caterpillar Minestar wheel loader during MINExpo International at the Las Vegas Convention Center on Monday, Sept. 26, 2016. Around 40,000 people are attending the world's largest mining

By ALEXANDER S. COREY LAS VEGAS REVIEW-JOURNAL
September 27, 2016 - 11:10 am

Can you dig Diatomaceous earth?

The international mining industry is well aware of the Silver State's standing as a producer of precious minerals.

But the Nevada industry is getting a bigger spotlight this week in Southern Nevada — as is the little-known Diatomaceous earth.

About 40,000 people from more than 130 countries are expected to attend MINExpo at the Las Vegas Convention Center. The event began Sunday and runs through Wednesday, with more than 1,900 exhibitors from 37 countries staking claim to over 840,000 square feet of exhibit space.

“Nevada industry is getting a bigger spotlight this week in Southern Nevada — as is the little-known Diatomaceous earth. About 40,000 people from more than 130 countries are expected to attend MINExpo at the Las Vegas Convention Center.”

Perception

Mining Does Not Pay Its Fair Share in Nevada

Is mining paying its fair share in
the state of Nevada?

By Mark Robison, March 16, 2013

Tweet G+ in Share PinIt

Barrick Gold's Ruby Hill mine is in Eureka County. Gold is selling for about \$1,600 per ounce. (Photo provided by Deon Reynolds)

The claim is often made that Nevada's mining industry isn't paying enough in taxes.

Toward that end, a bill before the Legislature called [Senate Joint Resolution 15](#) is up for debate again. It would remove from the state's constitution a provision creating a separate tax on mining.

Mining Benefits From Loopholes in Nevada's Tax Law

ARTICLE. 10. - Taxation.

Section 1. **Uniform and equal rate of assessment and taxation; valuation of property; exceptions and exemptions; inheritance and personal income taxes prohibited.** [Effective through November 26, 2018, and after that date unless the provisions of Senate Joint Resolution No. 13 (2015) are agreed to and passed by the 2017 Legislature and approved and ratified by the voters at the 2018 General Election.]

1. The Legislature shall provide by law for a uniform and equal rate of assessment and taxation, and shall prescribe such regulations as shall secure a just valuation for taxation of all property, real, personal and possessory, **except mines and mining claims, which shall be assessed and taxed only as provided in Section 5 of this Article.**

Sec. 5. **Tax on proceeds of minerals; appropriation to counties; apportionment; assessment and taxation of mines.**

1. The legislature shall provide by law for a tax upon the net proceeds of all minerals, including oil, gas and other hydrocarbons, extracted in this state, at a rate not to exceed 5 percent of the net proceeds. No other tax may be imposed upon a mineral or its proceeds until the identity of the proceeds as such is lost.

2. The legislature shall appropriate to each county that sum which would be produced by levying a tax upon the entire amount of the net proceeds taxed in each taxing district in the county at the rate levied in that district upon the assessed valuation of real property. The total amount so appropriated to each county must be apportioned among the respective governmental units and districts within it, including the county itself and the school district, in the same proportion as they share in the total taxes collected on property according to value.

3. Each patented mine or mining claim must be assessed and taxed as other real property is assessed and taxed, except that no value may be attributed to any mineral known or believed to underlie it, and no value may be attributed to the surface of a mine or claim if one hundred dollars' worth of labor has been actually performed on the mine or claim during the year preceding the assessment.
